Johnson Controls Intelligent Network Controllers

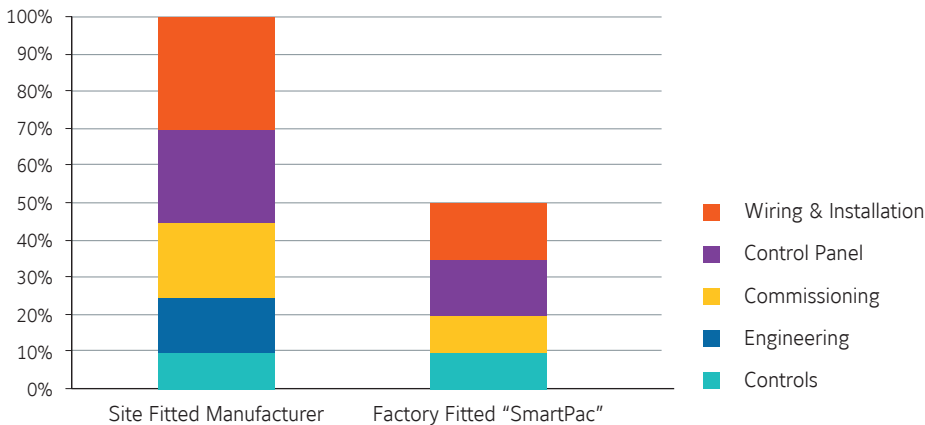

FX03 Controller

The controller is designed specifically to provide direct digital control of terminal unit applications with heating and/or cooling coils, an electric heater and a three-speed or variable speed fan. The device can be configured by the installer without the need of a PC and software tool, using a set of on-board dip-switches. The controller is designed for mounting by York OEM equipment FCU manufacturers on DIN-rail or directly on to the FCU surface.

Communication & Valves

The total assembly is completed in the factory; options for controllers include EUBAC approved systems or low cost configurable controllers. Further communication options enhance flexibility with BACNet and LON made available at no extra cost. Valves and Valve kits are also flexible, with modulating and on/off actuators, plus isolation valves if required fitted to the valve kits. Installations are tested and delivered to site with software ready loaded.

Fancoil Factory Package over Typical Site Installed Controls

Save Time...

Site Time is always precious, the more off site to benefit the flow of the contract, the deliver the desired result.

SmartPac Engineering is the control panels are standard and the savings are greater...
